

GO GREEN WITH INDUCTION HEAT

SAVE TIME, MONEY, AND CHOOSE ENERGY EFFICIENT PRODUCTS

REDUCE THE NEED FOR HARMFUL SOLVENTS

Our induction heating tools reduce the need for toxic solvents. Solvents are often needed when removing adhesives bonded to metal, but they can be harmful to the environment and toxic if they get on your skin. Induction heat eliminates or greatly reduces the need for these solvents; the result is an easy release and the adhesive stays with the cooler part (the graphic, emblem, decal, etc).

CHOOSE ENERGY EFFICIENT PRODUCTS

Torches and heat guns are not energy efficient. Much of the heat and energy generated dissipates before it even reaches the workload. Our induction heating tools, like the Inductor[®] power supplies, are energy efficient and place the energy where you need it when you want it. Flameless heat is localized so you can use it near brake lines, fuel lines, and combustible material. Giving you the heat where you need it without compromising the surrounding areas.

SAVE MONEY, REDUCE CONSUMABLES

Our tools allow users to salvage parts, some that may otherwise be discarded. With induction heat, there's little to no need for a propane torch. When using a torch, consumables such as gas expenses can add up. By switching to induction heat, you can save money by not spending money on consumables. Our consumables are the coils, which last up to 200 uses and our tools pay for themselves over time. There's no need for abrasive wheels that require harmful solvents and clean up.

SAVE TIME, REDUCE LABOR COSTS

Save time by not needing to cover or remove flammable parts nearby. Induction heat enhances workplace safety because of the precise, localized heat and no open flame. There is less potential to catch something on fire, damage the surrounding work areas or cause workplace injuries. Our flexible coils also allow users to reach hard-to-reach areas faster than if using a torch. Get the job done faster and safer!
